Customer Support:	support@coresense.com

What's New?

Following is a summary of the enhancements and new features added in this software release. Unless you requested to be a Release Candidate, the features listed below are not available until the General Release date noted above.

Enhancement: **Support Portal Update**

Version: All

System Path: Support Portal

Description: The Customer Support Portal has been updated and reorganized for better usability.

Enhancement: **PS-3537: Allow Purchase Configurations**

Version: 5.15, 7.4

System Path: Products > Channels > Website

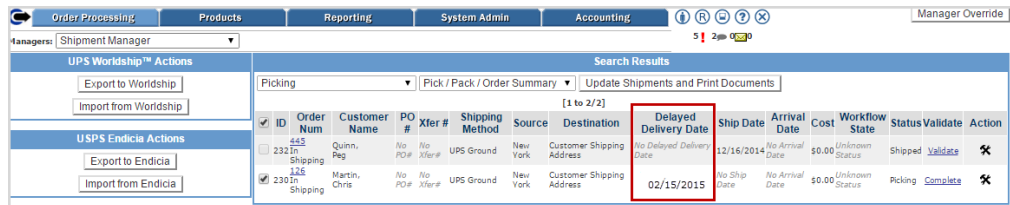

Description: Made changes so that when the Product Website Channel setting "Inventory Not Available Action" is set to "Show all configurations," all possible configurations will display on website and can be checked out regardless of inventory requirements. This allows highly configurable products to be purchased from the website so that SKU assignment can be generated after the order has been requested. These products will be flagged in the Back Office with inventory exceptions so that the necessary SKUs can be assigned to the product.

Enhancement: PS-3604: Delayed Delivery Date in Shipment Manager

Version: 7.4

System Path: Shipment Manager

Description: Added the Delayed Delivery Date field to the search results display in the Shipment Manager. Delayed Delivery dates are now also available as filters in the Search Filters options.

ID	Order Num	Customer Name	PO #	Xfer #	Shipping Method	Source	Destination	Delayed Delivery Date	Ship Date	Arrival Date	Cost	Workflow State	Status	Validate	Action
<input type="checkbox"/>	232In	Quinn, Peg	No	No	UPS Ground	New York	Customer Shipping Address	No Delayed Delivery Date	12/16/2014	No Arrival Date	\$0.00	Unknown Status	Shipped	Validate	
<input checked="" type="checkbox"/>	230In	Martin, Chris	No	No	UPS Ground	New York	Customer Shipping Address	02/15/2015	No Ship Date	No Arrival Date	\$0.00	Unknown Status	Picking	Complete	

Enhancement: PS-3651: SOI Quick Item Entry UI

Version: 7.4

System Path: Sales Order Interface

Description: Added a new UI in the SOI which allows a user to quickly input order items via model/part #. Items are immediately added to the cart (if validation passes). This functionality also includes a selector for a desired shipping method to apply to each new order item. If the method is valid on the SKU, the item is added to the cart with that shipping method applied. If it isn't, the item is still added to the cart but the user is notified that the shipping method was unable to be applied. To maintain desired speed requirements; deal calculation, tax calculation, and inventory are all disabled on the order while this UI is open.
