

January 2017 Product Release Information

Product:	CORESense Application Software
Release Number:	Versions 5.15, 7.4 and higher
Release Dates:	Beta Release Date: February 28, 2017 Current Release Type: Beta2(Jim Dandy) General Release: April 25, 2017
Also Includes Items from Release(s):	None

What's New?

Following is a summary of the enhancements and new features added in this software release. Unless you requested to be a Release Candidate, the features listed below are not available until the General Release date noted above.

Enhancement: **SS-2067: Solr Update**

Version: 5.15, 7.4

System Path: Website Searches

Description: Updated Solr "detail" field parameter to support a limit value of 12 to allow better grid breakdown points.

Enhancement: **PS-4781: Time Clock Enhancement**

Version: 7.4

System Path: Time Clock Manager

Description: Updated Time Clock functionality with following:

1. The Connect POS Time Card window will now show the accumulated weekly hours worked.
2. The Connect POS Time Card window will now show a comment window.
3. The Back Office Time Card manager will now show the comments.

Enhancement: **PS-4769: CORESense Product Review**

Version: 7.4

System Path: Product Reviews

Description: Enhanced CORESense Product reviews with the following:

1. Product Reviews Import to support specifying multiple product IDs for a single review.
2. Added the ability to export Product Reviews in the same format that the existing Product Reviews Import takes.

Enhancement: **PS-4750: Replenishment Tiers**

Version: 7.4

System Path: Replenishment Tier Manager

Description: Enhanced Replenishment Tier functionality so that users can assign multiple date ranges, each with a defined re-order value and quantity to purchase. The Replenishment Tier Manager now has three additional fields:

1. Type
2. Override Reorder Point
3. Override Quantity

If the type is set to "multiplier":

- The system behaves as previously.
- The quantity to reorder is determined by multiplying the needed quantity by the value in the multiplier field.

If the type is set to "override":

- The multiplier field is ignored.
- The model_stock_levels.reorder_point field is ignored and the Override Reorder Point field from the replenishment tier is used instead.
- The model_stock_levels.quantity field is ignored and the Override Quantity field from the replenishment tier is used instead.

Enhancement: **PS-4736: Instore Inventory on Website**

Version: 7.4

System Path: Website

Description: Added the ability to view in store inventory on the website based on a zip code and distance that is provided by the website to the back-end.

Enhancement: **PD-1412: POS Release IDs**

Version: 7.4

System Path: POS

Description: Added the name of the software release to the Classic and Connect POS. In Connect, click on the Menu button, then Info In Classic, click on the About link on the Main Menu.

Enhancement: **PD-1403: Third Party Library Updates**

Version: 7.4

System Path: POS

Description: Updated Third party libraries to latest versions.
1. Updated Cron Expression Library from version 1.1.0 to version 1.2.0. Used by the Cron Daemon in the Premium Environment.
2. Updated PayPal SDK from version 3.3.0 to version 3.3.2. Used by PayPal checkout.
3. Updated PHP Security Library from version 1.0.3 to version 1.0.5. Used by Data Feeds for SFTP transport.
4. Updated Solarium Library from version 3.6.0 to version 3.7.0. Used by SOLR Search.

Enhancement: PD-1398: **Connect POS Display**

Version: 7.4

System Path: Connect POS

Description: Added the display of the following customer statistics to Connect POS:

- Total Spent
- Avg. \$ Spent Per Order
- Sales Rep
- Customer Since

This information is displayed above the blue footer bar, similar to the quick info bar we added. These field displays can be individually controlled per terminal in the POS Replication Manager, via the following settings:

Total Spent = "info bar.displayTotalSpent.enabled"

Avg. \$ Spent Per Order = "info bar.displayAverageSpent.enabled"

Sales Rep = "info bar.displaySalesRep.enabled"

Customer Since = "info bar.displayCustomerSince.enabled"

Enhancement: PD-1396: **Connect POS Loyalty**

Version: 7.4

System Path: Connect POS

Description: Added display of available Loyalty rewards to Connect POS. If the customer currently applied to the order has any loyalty rewards outstanding, their cash value will be displayed on the info bar toward the bottom. This field display can be individually controlled per terminal in the POS Replication Manager, via the following settings
Loyalty Reward = "info bar.displayLoyalty.enabled"

Enhancement: PD-1395: **Connect POS Scan**

Version: 7.4

System Path: Connect POS

Description: Added an editable quantity field and shortcut buttons to the scan window in Connect POS, so that users can specify the quantity about to be scanned. The shortcut buttons displayed in the scan window can be set via a comma-separated list of numbers in the "scanQuantityValues" terminal setting in the POS Replication Manager. If not set, it will default to 1 through 9.

Bug List

IMPORTANT: The bug list is intended for reference only. In an effort to prevent any potential self-misdiagnosis, if you think that you have experienced a cited issue, please contact Support Team to verify. Although a listed bug might sound similar to your situation, it is best to confirm it.

Bug #	Description
13836	Updated the code to, upon product saving/creation in the back office, will update the table that controls keyword searching on the Connect POS. As soon as the product is replicated to the POS it should be searchable via keywords and via Product ID.
14056	Updated the Google Variance Feed to check each configuration's associated SKU before including it in the feed.
14126	Updated Persistent Cart to use price adjustments.
14140	Updated System Settings for three new shipping method selectors. Updated Amazon Order Creation code to look for those, if the order is set to use them, and set the order's shipping method to the one set in the channel system settings.
14141	Updated the code to properly recalculate tax when changing the ship to on an order in the Order Manager. It grabs the ship to's order items only to recalculate and not the whole order's order items.
14147	Fixed Customer Credit issue to keep track of how much customer credit was applied to the order and to adjust the current available customer credit with that number. Updated the code to refresh when applying/removing customer credit, so the number will change (or the option removed completed) as customer credit is added/removed.
14155	Updated the code for IHA return payments in the Back office Return Manager. It wasn't working correctly for existing returns.
14160	Fixed issue with incorrect sales tax calculation when Update Quantity function was being used.
14164	Fixed issue with pre-order ship method assignments creating multiple orders for a single customer.
14166	Fixed issue with recurring orders suspended status.
14170	Added "Close Window" buttons for Connect POS users when working in the Back Office from the Connect POS.
14173	Fixed issue with discount deal type adding additional quantities to promotion in Deal Manager.
14177	Updated the code to take into consideration configuration amount when using discount_price for barcode label pricing.
14188	Fixed coupon code issue for Order Discount deal types in Connect POS.
14193	Fixed issue in Connect POS when performing order search during Return process.
14197	Fixed issue of processing Ingenico Tempus payments on Connect POS.
14202	Fixed issue with adding non-grid products to a PO using the PO Builder.

14208	Fixed issue of Backorder report not consistently displaying COGs.
14210	Fixed issue in Connect POS with customer contact information not being complete due to updates made to data during sale.
14219	Fixed Connect POS issue for order level adjustments being applied multiple times.
14231	Fixed issue with forms in eBay Back Office fields.
14234	Fixed issue with Qty In Since Count' and 'Qty Out Since Count' columns in the Physical Inventory Count Manager.
14235	Fixed issue with barcode template import.
14236	Fixed issue with Pre-Order calendar editing permissions.
14238	Updated Connect POS online Help file so that user name and password are hard coded.
14243	Updated the code so, when creating or saving contacts from the Back Office, it will update the Connect POS keyword search table so that they are available immediately.
14247	Fixed issue with barcode searches in Classic POS.
14248	Fixed issue with barcode manager search listings so that it sorts by the barcode id, which happens to be the same as the configuration.
14249	Fixed issue with criteria not displaying on Accounting > Reports tab.
14250	Fixed issue for users unable to access shipments from Shipment Manager.
14251	Fixed issue for ability to resume a suspended club order.
14252	Fixed issue with Time Clock Manager duplicating time records.
14256	Fixed issue with Order Exception report displaying HTML tags.
14258	Fixed issue with club order enrollments not being assigned correctly against each item versus all memberships
14259	Fixed issue with Inventory Report Builder not correctly filtering by warehouse location.
14260	Fixed issue with TrueShip entries not being removed when the shipment moves to status of 'shipped.'
14261	Fixed issue with Email Campaign Manager not displaying results based on specific date ranges.
14262	Fixed issue around batch update function for eBay items.
14263	Fixed issue with the configuration price being added twice for the second product, which affected the first product when in the cart together.
14264	Fixed issue with returned items not being returned to stock.
14265	Fixed issue with customer data that had apostrophes being displayed with back slashes.
14266	Fixed issue with some permissions not being available on the Connect POS.
14267	Fixed issue with eBay Launch Pad search criteria so that results do not include the same launch pad multiple

	times.
14271	Fixed issue with the expiration date not being set to the system default when purchasing a new value card in the SOI.
14272	Fixed issue with fulfilled orders not assigning inventory to shipments.
14274	Fixed issue with persistent carts being duplicated within single order.
14276	Fixed issue with delayed search results in Transfer Manager for "Received By" criteria.
PD-1409	Fixed several defects with Connect's Return/Loyalty logic.
