

January 2017 Product Release Information

Product:	CORESense Application Software
Release Number:	Versions 5.15, 7.4 and higher
Release Dates:	Release Date: May 9, 2017 Current Release Type: Beta 1(Stay Thirsty) General Release: August 1, 2017
Also Includes Items from Release(s):	None

What's New?

Following is a summary of the enhancements and new features added in this software release. Unless you requested to be a Release Candidate, the features listed below are not available until the General Release date noted above.

Enhancement: **SS-2119: Date Format for Template Tag**

Version: 7.4

System Path: Email & Documents Template Manager

Description: Updated the date format for the <DELAYED_DELIVERY_DATE> template tag to display as MM/DD/YYYY so that it is in line with the other date displays that appear when using Email & Document Templates.

Enhancement: **SS-2100: Shipment Documentation**

Version: 7.4

System Path: Email & Documents Template Manager

Description: Updated the Shipment Document Generation code to set vendor_id so vendor information, if available, can be grabbed and the source used.

Enhancement: **SS-2062: POS Drawer Adjustment**

Version: 5.15, 7.4

System Path: POS

Description: Updated Classic and Connect POS so that when viewing/printing (via receipt) the X-Out Register Report, it will show any Drawer Adjustment comments.

Enhancement: **PS-4848: Solr Update**
Version: 7.4
System Path: Website Template Manager
Description: Enhanced Solr to enable the use of info_fields which reference channel custom fields in the fulltext_search_config table.

Enhancement: **PS-4826: Listrak and SOI Channels**
Version: 7.4
System Path: Data Feed
Description: Enhanced the Listrak Order Item Data Feed so that it can be run with any SOI channel.

Enhancement: **PS-4815: Connect POS Scanning**
Version: 7.4
System Path: Connect POS
Description: Updated Connect POS so that when scanning an item that is already in your cart it will result in quantity stacking only if the delivery timing of both items match. This will prevent an item marked as shipped that has an increase in quantity added to be added to the shipment by default.

Enhancement: **PS-4810: Solr Search**
Version: 7.4
System Path: Website Template Manager
Description: Enhanced Solr search to perform the following:

1. Support requesting Solr search result relevance in detail field list. This field is always allowed, regardless of the listed allowable fields.
2. Previously, you could select detail only if there were less than 11 search results. Now, if there are more than 12, you'll get detail, but only for the first 12.

Enhancement: **PS-4798: Google Inventory Feed**

Version: 7.4

System Path: Data Feed Manager

Description: Added new Google inventory feed that supports sending local product inventory to Google based on specific warehouse(s).

- Each feed should correspond to 1 store. This needs to be set up by adding to the table Google Local Product Inventory Data Feed Store Codes using the Back Office's technical configuration manager.

- The inventory level a feed sends can be setup to draw from multiple warehouses. This needs to be setup by adding to the table Google Local Product Inventory Data Feed Store Codes using the Back Office's technical configuration manager.

Enhancement: **PS-4794: Return Manager Order Link**

Version: 5.15, 7.4

System Path: Return Manager

Description: Updated Original Order # link in the Returns Manager to open the order in the Order Manager using the user's specified default Order Manager tab.

Enhancement: **PD-1446: eBay Cache Cron**

Version: 5.15, 7.4

System Path: eBay

Description: Updated backend cron for eBay: Re-wrote table management inside the eBay Cache Cron and re-wrote how the eBay cache is marked dirty.

Enhancement: **PD-1431: Back Office Cache**

Version: 5.15, 7.4

System Path: Back Office

Description: Adjusted the Back Office cache by increasing file permissions to 666/777 in dev mode, and 664, 2775 in production mode.

Enhancement: **PD-1429: Amazon Process Logs**

Version: 5.15, 7.4

System Path: Amazon

Description: Updated the Amazon Process Logs Viewer to be able to specify which feed type to look at.

Enhancement: **PD-1425, 1426, 1428, 1390 System Updates**

Version: 5.15, 7.4

System Path: System Backend

Description: Updated the following system elements:

- Updated the Action Log Viewer to have Start/End Date fields.
- Upgraded Smarty from 2.6.18 to 2.6.30.
- Updated Solarium library from 3.7.0 to 3.8.1.
- Updated Accounting tab to use QueryBuilders. This also included updating the Accounting Summary Cron.

Enhancement: **PD-1423: User Account Manager**

Version: 7.4

System Path: User Account Manager

Description: Updated the User Account Manager to be able to clear other user's cached variables (instead of just the logged-in user).

Enhancement: **PD-1367: Connect POS Setting**

Version: 7.4

System Path: Connect POS

Description: A new terminal setting called salesReceipt.creditCardCustomerCopy has been added to the POS Replication Manager. If set to 1 (the default), a separate customer copy of each credit card payment receipt will print. If set to 0, the customer copy will not print and the credit card transaction ID and authorization code will instead print at the bottom of the main sales receipt.

Enhancement: PD-1361: **Connect POS Price Override Setting**

Version: 7.4

System Path: Connect POS

Description: Added a new configuration setting **priceOverride.enabled** to allow toggling this feature per terminal. The feature uses the same permissions as price adjustment: POS Price Adjustment:

- A new choice has been added to the cart item menu: Price Override. Selecting this choice will pop up a new dialog where the override amount can be entered. If there is already an override amount set, you'll also get a Remove button, which will clear it and reset the original unit price.
- Applying a price override will remove any previous price adjustments on that line.
- Applying a price adjustment will remove any previous price overrides on that line.

Enhancement: PD-1284: **Website User/Password Request**

Version: 7.4

System Path: Website

Description: Added new section in System Settings > Channels > Website called 'Enable Basic Authentication', which allows a customer (or support, or development, etc.) to set a username and password through code instead of submitting a hosting ticket. This allows customers to remove the username/password on their schedule instead of trying to time it with hosting team.

Enhancement: PD-1296, 1120, 1121, 1123: **System QueryBuilder Updates**

Version: 5.15, 7.4

System Path: System Backend

Description: Converted the following function to user QueryBuilders:

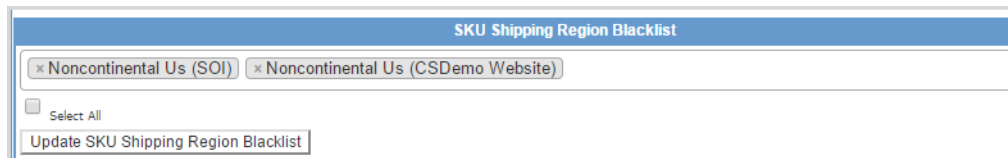

- Office Scripts
- Sales Report Builder
- Inventory Report Builder
- Saved Report Viewer and Manager

Enhancement: PS-4832: **Blacklist SKUs From Shipping Regions**

Version: 7.4

System Path: Inventory Manager > Shipping

Description: Added the ability to blacklist SKUs from being shipped to specific shipping regions (Inventory Manager > Shipping) and update shipping method cost calculation to not return a shipping method if a SKU is blacklisted for the region / shipping method combination.

Enhancement: PS-4831: New Subtotal SKU Shipping Driver

Version: 7.4

System Path: Inventory Manager > Shipping

Description: Added a new SKU Shipping Driver of "Subtotal", which will utilize the existing SKU Shipping Driver infrastructure, and allow cost calculation to be determined based on the subtotal of the items that have SKUs marked as "Subtotal" for their SKU Shipping Driver.

Bug List

The bug list is intended for reference only. In an effort to prevent any potential self-misdiagnosis, if you think that you have experienced a cited issue, please contact Support Team to verify. Although a listed bug might sound similar to your situation, it is best to confirm it.

Bug #	Description
BUG-14205	Fixed issue with the website minicart code not triggering the Listrak SCA data.
BUG-14234	Fixed issue with Physical Inventory Count Manger fields: 'Qty In Since Count' and 'Qty Out Since Count' not working correctly.
BUG-14260	Updated the Trueship Database Table to delete shipments from 'trueship_export' for a given shipment id as soon as the shipment moves to status of 'shipped'.
BUG-14280	Updated Import Log Viewer to display who performed the import.
BUG-14284	Added another button to PO Wizard confirmation page labeled 'Go to Purchase Order Queue' so the user can go to PO Queue.
BUG-14289	Fixed issue with website pricing rounding issue for configured products.
BUG-14295	Corrected issue in the User manager where the "available" permissions are not filtering the assigned permissions from the "Roles."
BUG-14296	Updated display of Connect POS exchange buttons to fit better on small screens.

BUG-14298	Fixed issue in Shipment Manager Search Results when batch option is selected against shipments and after documents are printed for selected shipments, the shipments would be removed from results.
BUG-14311	Fixed issue with Scheduled Saved Reports not being emailed out.
BUG-14320	Corrected issue where incorrect records were displaying under Accounts Receivable report.
BUG-14330	Fixed issue in SOI so that if there is a permanent markdown, the markdown's price is used instead of the base price when getting the discount amount if a deal is found.
BUG-14363	Fixed issue where logging into your account on the website shopping cart page, new deals based on customer were not reflected in the shopping cart until navigating to the checkout screen.
BUG-14364	Fixed Connect POS issue where if you choose to ship an item as part of an exchange, you are never taken to the shipping method select screen.
BUG-14366	Corrected issue with IHA deals not being applied to new customers on the Classic POS.
BUG-14388	Fixed Connect POS issue where barcode submission of new items in certain cases where dialogs had just been closed were not scanning.
BUG-14390	Fixed Connect POS issue where cart line items stay selected when they should not when opting to ship item.
BUG-14426	Fixed issue with Batch Product Update not excluding a Price Change Exemption.
BUG-14434	Fixed issue with Connect POS returns with no originating order failing on payment screen.
BUG-14440	Corrected display of payments on Connect POS exchange receipts.
BUG-14455	Corrected issue with Sales Report Builder not showing all personalizations for a product if a quantity greater than 1 is ordered, it was only shows the first one.
BUG-14464	Fixed issue of adding recent order items to an SOI order that was causing no shipping methods to be available and unable to complete the order.
BUG-14478	Corrected Sales Report Builder results to display all deal names when selected, not just order item deals.
BUG-14481	Fixed issue with multiple shipments being generated for orders with multiple items of varying quantities.
BUG-14494	Fixed issue with Listrak Retrieve Cart not being set after clearing cookies then visiting site.
BUG-14495	Corrected display issue in Return Wizard for the number of days when order was placed being cited as 17,5000 Days Ago.
BUG-14509	Updated Channel Advisor import to not store bogus email addresses from Jet.com.
BUG-14515	Corrected issue with slow Return Wizard performance.
BUG-14516	Fixed issue with inventory that has been voided still being associated to an order and not being damaged out.
BUG-14517	Fixed issue for inventory not being assigned to drop-ship and JIT POs after they have been received.
BUG-14518	Corrected issue with eBay orders coming into CORESense with no customer information for customer records that do not already exist.

BUG-14521	Corrected issue with Accounting tab reports not working due to back end date relationship.
BUG-14522	Corrected issue with Tempus tokenization impacting credit card returns from the Back Office.
BUG-14523	Corrected removal of Add New Barcode link from Product > Inventory page.
BUG-14526	Corrected mistakes in fraud detection and capturing credit card automation, which, if enabled, kept the rest of automation from running until finished. Any client with these enabled would have had automation stop working entirely.
BUG-14529	Corrected timing issue for Classic POS customer search.
BUG-14530	Fixed display issue when after receiving inventory on a transfer, the inventory wasn't moving from one warehouse to another. The Inventory Manager still shows the sku as "In Transfer to" the other warehouse.
BUG-14533	Fixed issue for eBay Auction Manager date searching failure.
BUG-14535	Fixed issue with PO builder not generating POs when completing PO creation.
BUG-14538	Corrected website category navigation issue for logged in users.
BUG-14540	Corrected issue with SOI shipping methods not being assigned correctly per method selection and when shipping costs were adjusted.
BUG-14543	Fixed issue with Physical Inventory Count Manager search not displaying results and location filter not filtering accurately.
BUG-14542	Corrected issue with shipments not going into ShipWorks due to trademark symbol in name on order.
BUG-14544	Fixed issue of being unable to print barcode labels that have configurations.
BUG-14545	Fixed issue with required POS custom fields not populating correctly.
BUG-14546	Fixed issue with Financials > sales report not returning sales if run by Corporate sales type.
BUG-14548	Fixed issue for Source Qty in Transfer Builder being increased instead of only the Destination Qty being increased.
BUG-14549	Fixed issue with not being able to a Take Now sale in the SOI due to the Take Now option not being available to select.
BUG-14551	Fixed issue with shipments being created for items that had been returned.
BUG-14561	Fixed issue with PO Manager filters of greater than or less than not working.
BUG-14564	Fixed issue with Warehouse Manager Location Label Generation Wizard displaying only a blank screen.
BUG-14567	Fixed issue of missing tabs in the EDI Manager.
BUG-14574	Fixed issue with transfers not assigning inventory to orders.
BUG-14575	Fixed issue with Transfer Manager not adding inventory to shipment when receiving backordered items.
BUG-14584	Fixed issue with resetting warehouse fulfillment priorities being saved as zero.
BUG-14586	Fixed issue with Classic POS not returning sales tax for returns with no originating order.

BUG-14593	Corrected issue with Deal Manager Product List not deleting products that no longer meet deal product criteria.
BUG-14594	Fixed issue with IHA returns on the Classic POS due to inactive customer link to IHA department.
