<b>Also Includes Items from Release(s):</b>	Beta 1, RC 1

## What's New?

Following is a summary of the bug fixes for this software release. Unless you requested to be a Release Candidate, the fixes listed below are not available until the General Release date noted above.

**Enhancement:**      **PS-4940: Connect POS Receipt Display**

**Version:**            7.4

**System Path:**      Connect POS

**Description:**      Added two new POS terminal settings available in the POS Replication Manager:

- salesReceipt.displayRefundAmount
- salesReceipt.displayUnitAndExtPrice

These control the display of text on the sales receipt for Refund Amount and Unit and Extended Price.

**Enhancement:**      **PS-4937: Inventory Report Builder Fields**

**Version:**            7.4

**System Path:**      Reporting > Inventory Report Builder

**Description:**      Added **In Transfer** as a result column for Inventory Levels (All Warehouses) and **In Transfer To** as a result column for Inventory Levels (By Warehouse) within the Inventory Report Builder.

**Enhancement:** **PS-4934: Inventory Report Builder Fields**

**Version:** 5.15, 7.4

**System Path:** PayPal Express Checkout

**Description:** Added option for users to select PayPal Credit as a payment option in the checkout. Although still through PayPal using the same PayPal Express Checkout Integration, selecting PayPal Credit as a payment option tailors the PayPal Checkout to offer the end user a more streamlined checkout experience by defaulting the PayPal payment method to PayPal Credit.

From there, the user will apply for credit through PayPal and complete the order. Note: If a user checks out with PayPal payment type, signs into PayPal, a user can in fact already select PayPal Credit. This update simply reduces the number of steps and streamlines the checkout process for users who want to use PayPal Credit by creating a new payment method where it defaults to this method of payment.

**Enhancement:** **PS-4930: Sales Report Builder Field**

**Version:** 7.4

**System Path:** Sales Report Builder

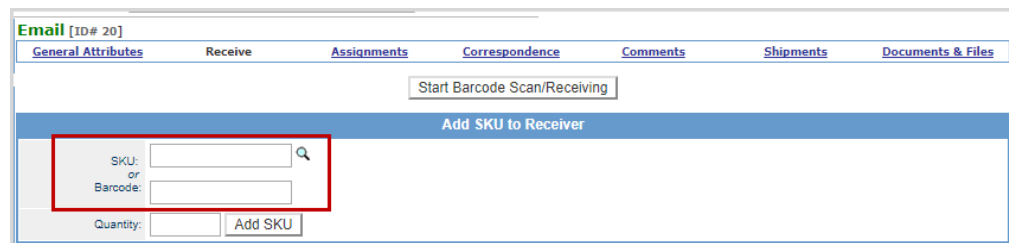

**Description:** Added a Balance Due field option in the Sales Report Builder under Results > Order General Attributes.

**Enhancement:** **PS-4925: Add SKU to Receiver with Barcode**

**Version:** 7.4

**System Path:** PayPal Express Checkout

**Description:** Added the ability to add SKUs to a PO receiver by Barcode in addition to the existing SKU option, from the PO Receiver screen.

The screenshot shows a web interface for adding SKUs to a receiver. At the top, there are navigation tabs: "General Attributes", "Receive", "Assignments", "Correspondence", "Comments", "Shipments", and "Documents & Files". Below these is a button labeled "Start Barcode Scan/Receiving". The main section is titled "Add SKU to Receiver" and contains a form with the following fields: "SKU: or Barcode:" (with a search icon), "Quantity:", and "Add SKU". A red rectangular box highlights the "SKU: or Barcode:" input field.

**Enhancement:** **PS-4924: UPS Worldship Export Shipment Order Items Table**

**Version:** 7.4

**System Path:** UPS Worldship Export Process

**Description:** Added new table (ups\_worldship\_export\_shipment\_order\_items) that has a list of order items to shipment records and is populated by the UPS Worldship Export process.

**Enhancement:** **PS-4922: Connect POS Open Return Setting**

**Version:** 7.4

**System Path:** Connect POS

**Description:** Added a new POS terminal setting available in the POS Replication Manager:

- returns.allowSaveAsOpenReturn

This provides option to remove the Save As Open Return option from the Connect POS interface.

**Enhancement:** **PD-1506: Advanced Website Template Editor**

**Version:** 5.15

**System Path:** Website Template Manager

**Description:** Back-ported the Advanced Website Template Editor to 5.15.

**Enhancement:** PD-1500: **Shipping Calculator Update**

**Version:** 7.4

**System Path:** Website Template Manager

**Description:** Updated the shipping calculator so that it refreshes the shopping cart without reloading the page, allowing updates, such as deal calculation, to show. It is set-up to work once additional html is added, and not disrupt the shipping calculator's functionality if the additional html is not added. It will work whether or not the shipping calculator is within the shopping cart plug-in. Contact CORESense Support to request this update.

**Enhancement:** PD-1498: **Connect POS Token Update**

**Version:** 7.4

**System Path:** Connect POS

**Description:** Updated the code to look at local storage, then cookies, then file system for finding the token so as to optimize token retrieval.

**Enhancement:** PD-1137: **QueryBuilder Updates**

**Version:** 7.4

**System Path:** Back Office > Tools

**Description:** Updated Back Office > System Admin > Tools functionality to use QueryBuilders.

## Bug List

**IMPORTANT:** The bug list is intended for reference only. In an effort to prevent any potential self-misdiagnosis, if you think that you have experienced a cited issue, please contact Support Team to verify. Although a listed bug might sound similar to your situation, it is best to confirm it.
